### Methodology Notes

- Based on reported MPD incidents, which agencies may later revise.
- Risk Score = relative percentile (0 = lowest risk locally, 100 = highest); it drives the safer-than figures.
- Incident Intensity is kept as a detail metric for incident-rate context.
- Address scores reflect nearby reported incidents, not the exact property.
- Trend = last 12 months vs the prior 12 (latest weeks excluded as still-reporting); too few prior incidents shows "Insufficient data."
- Expected-vs-actual compares current activity with same-month historical expectations.
- Residential rankings group residential and mixed-use areas; parks, federal, and institutional land rank separately.
- Crime data may be revised by source agencies.

Incident counts reflect reported crimes and are subject to revision by source agencies. Recent weeks may still be under-reported due to MPD processing lag. Calendar-month windows are computed in UTC. This brief describes historical reported activity — it is not a prediction of future safety.
